

UI Development Challenge

Athenahealth has decided to re-design its Career page. It is critical for the business that the page works on all screen sizes and delivers consistent experience across 3 popular browsers . For the same, technical architects have decided to go ahead with bootstrap grid system.

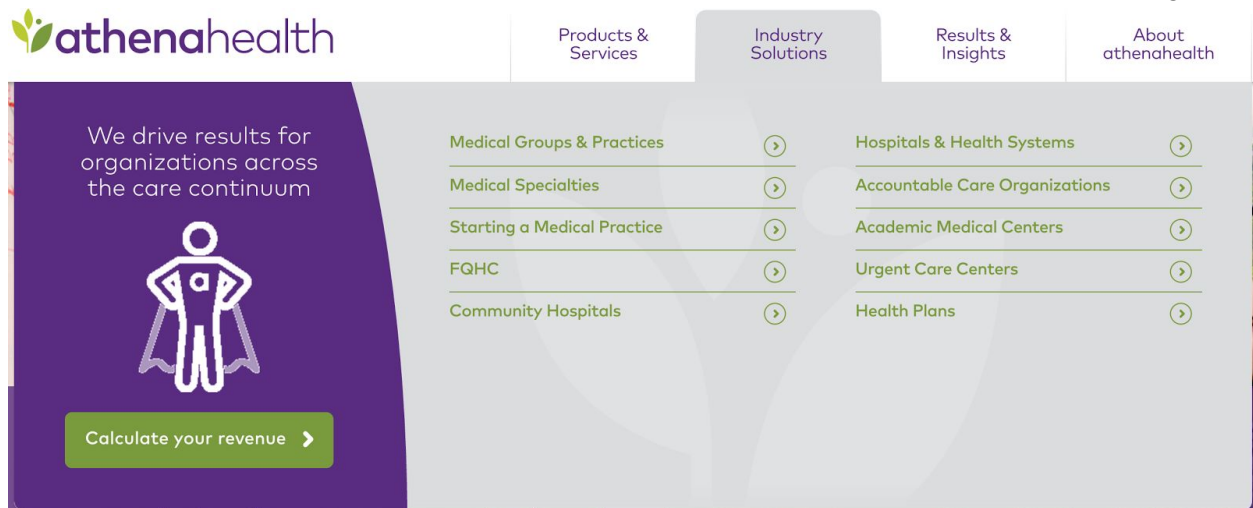

Your mission is to understand the design and provide a production quality HTML5 code for same.

The Design : Please refer to the file in the design folder.

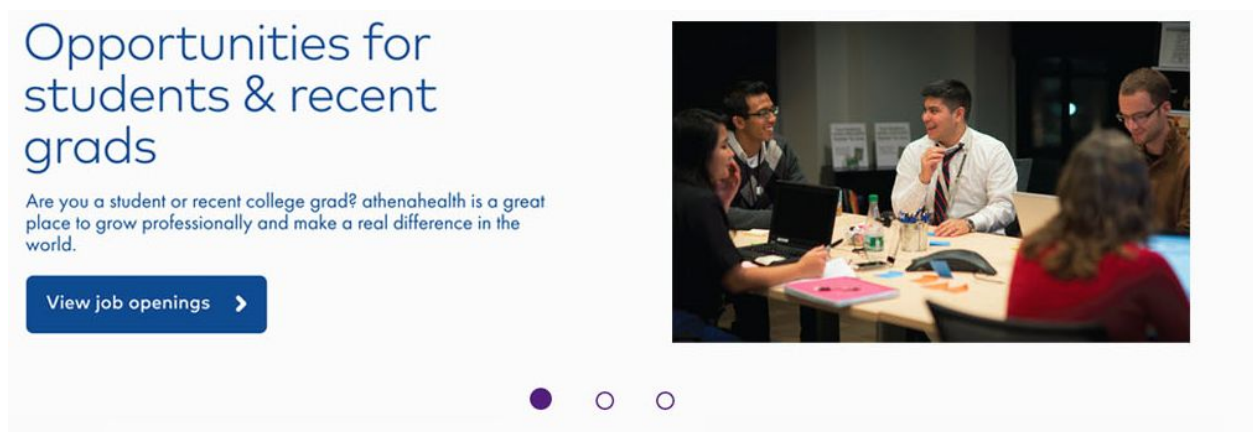

The Code : Please use the responsive version of the bootstrap grid system.

Functionalities to be added

1. At Least one of the menu should have submenu and it should be of the below design

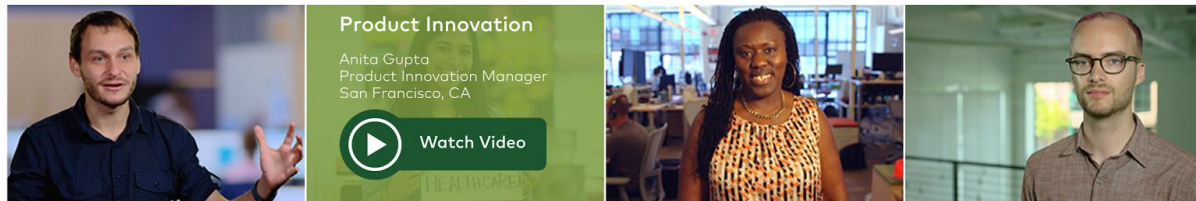

2. This section should be of carousel with three slides

If you can pull the data for the carousel as JSON object and populate using the javascript , you will get bonus points.

3. For the “Hearfrom athenista s”

On hovering the image, the overlay should be shown on the image similar to the below design

You have to add index.html and add your own css/js files. This should be responsive layout .

The Assets

All the images can be found in the assets folder.

Focus on

- Using html5 semantic elements like header, footer etc.
- Following the bootstrap grid system.
- Separating presentation from content (no inline styling)
- Should be responsive, mobile layouts should have “hamburger menu”
- Should be compatible with higher resolution desktops

Feel Free to

- Use webfonts
- Use javascript if required
- Use 3rd party libraries
- Use google

Impress us by

- Experimenting with some css animation, lazy loading, parallax

You can check in this project to your github and send us the link.

All the best!
